- **Four surfaces with different degree of hydrophilicity, ideal for solid phase immunoassays (ELISA)**
- Engineered for easy/reproducible passive absorption
- Certified homogeneity of binding

The PolySorp surface is hydrophobic for binding biomolecules that have hydrophobic properties. New MediSorp is slightly hydrophilic and binds proteins with a mixed hydrophilic/hydrophobic composition. This special surface provides an ideal balance of high protein absorption for coating yet low assay non-specific binding. MaxiSorp is still more hydrophilic. It is optimized for binding immunoglobulin but also binds a wide range of other proteins. New MultiSorp is the most hydrophilic surface offered. It binds biomolecules with a hydrophilic composition such as glycoproteins and glycans. Standard 96-well format/ 86 x 128 mm.

**Accessories**

- **EW-01929-10 EW-01929-General Accessories**  
Availability: Lead time for t is 5 days.  
Price: \$120.15/CS  
Qty:  [Add To Cart](#)
- **EW-01929-11 EW-01929-General Accessories**  
Availability: Lead time for t is 11 days.  
Price: \$88.10/CS  
Qty:  [Add To Cart](#)
- **EW-01929-12 Sealing tap polyester, sterile**  
Availability: In Stock  
Price: \$135.80/CS
